October 2026

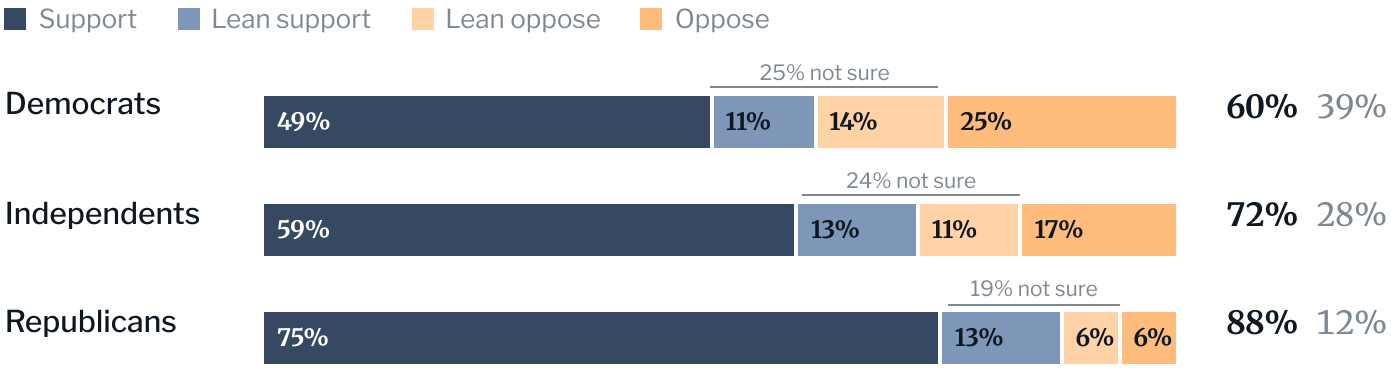

Three in four voters support the White House Accord on Super Intelligence

74% of U.S. likely voters support the accord.

Voters were presented with the following explanation of the accord: President Trump and the heads of six major tech companies (OpenAI, Google, Meta, Anthropic, xAI, and Nvidia) signed the White House Accord on Super Intelligence, a voluntary pledge aimed at responsible innovation. Under the accord, each company agrees to put robust controls in place to watch its most powerful systems for dangers such as helping with cyberattacks or biological and chemical weapons, to have an independent outside auditor check whether those controls work, and to have a committee of its board of directors oversee safety and make sure problems get fixed. Presented with that description, 1,008 U.S. likely voters surveyed on October 6 and 7, 2026, gave the accord 61% support and 16% opposition on the initial question. With those who were not sure included, support reaches 74% and opposition 26%.

Party breakdown of support

n = 1,008; Democrats 335, independents 311, Republicans 362.

AI Policy Institute. 1,008 U.S. likely voters surveyed online October 6 to 7, 2026; weighted by gender, race, education, 2024 presidential vote, age, and attention checks; approximate precision ±4.1 points. Combined figures add the follow-up answers of those who were not sure to the initial answers and are derived from the rounded toplines. Full question wording and tables in the toplines.
